Education

Nanjing University — **Sep 2023 – Jun 2027**

B.S. in Computer Science — *GPA: 4.56 / 5.0 (Top 10%)*

Research Interests

Efficient training of large language models, multimodal learning, and code intelligence. Interested in building more scalable and generalizable AI systems. Now I'm exploring World Models.

Research & Internship Experience

LLM Post-Training: Efficient SFT & Open-source Data Protection — **Mar 2025 – Present**

- **Co-first Author | ICLR 2026 DATA-FM**

  Winning the Pruning Gamble

  Large-scale empirical study showing that naive combinations of sample- and token-level pruning can underperform random baselines. We propose a **dynamic pruning strategy based on an error–uncertainty plane**, consistently outperforming SFT baselines (up to **+38%**) across multiple datasets, model families.

- **Third Author (Core Contribution)**

  Train in Vain

  Functional data poisoning for preventing unauthorized training on open-source code datasets. Led method implementation and major experiments (attack evaluation, ablation studies, efficiency analysis). Demonstrated that only **10% data injection** can achieve **100% compilable** and highly effective poisoning.

Agent Systems: Efficiency–Capability Trade-offs for Search & Code Agents — **Jul 2025 – Present**

- **First Author**

  Collected real-world failure trajectories of search agents and performed **systematic failure mode analysis**. Explored mechanisms for **experience reuse** to improve agentic RL training signals, and validated effectiveness through critic model training.

- **Second Author**

  Self-Evolving Code Agent

  Built the full pipeline for GitHub data collection, training, and evaluation. Designed a two-stage training framework using **natural language defect descriptions** to improve code agent performance on SWE tasks.

- **Contributor**

  ContextBench

  A benchmark evaluating agents' **context retrieval and utilization** abilities across four SWE-style repository-level tasks with human annotations.

Multimodal Research: Audio-Visual Generation Evaluation — **Oct 2025 – Present**

- **Co-first Author**

  T2AV-Compass

  A comprehensive evaluation framework for audio-visual generation systems. Combines traditional objective metrics with MLLM-based subjective evaluation and consistency analysis to identify key **bottlenecks in current AV generation models**.

- **Deep Learning Algorithm Intern | Insta360 Research Institute**

  Worked on a panoramic video camera-motion agent. Responsible for model architecture exploration, training strategies, offline evaluation systems, and automated data synthesis and annotation pipelines.

Survey: Linear Attention — **Sep 2025 – Jan 2026**

- *A Survey of Linear Attention: Algorithm, Theory, Application, and Infrastructure*

Technical Skills

- **Languages:** Python, C/C++, Java, Shell
- **ML Frameworks:** PyTorch, LLaMA-Factory, verl
- **Tools:** Git, Docker, Slurm, Linux
- **Data Analysis:** AST processing, Pandas, NumPy

Selected Projects

Automated Evaluation System for App Privacy Policies **2025**

- Developed a framework combining **K-means clustering** and **LLM-as-a-judge** to analyze compliance of mobile app privacy policies.
- Built an end-to-end pipeline using **Appium automation** and **Xposed-based monitoring** to capture and visualize privacy data flows.

Cross-lingual Robustness of Text Watermarking **2025**

- Deployed Llama3.1-8B and Qwen3-8B locally to evaluate watermark robustness across CN, Eng, and Thai.
- Designed adversarial experiments and quantified degradation using ROC-AUC metrics.

Honors

- Tencent Scholarship
- People's Scholarship
- Outstanding Student Leader
- Outstanding Student
- Outstanding Youth League Cadre
- Provincial Social Practice Award

Leadership

Student Leadership & Teaching **2023 – Present**

- Teaching Assistant for Advanced C++ Programming
- Class Youth League Secretary and Vice Class Monitor
- Executive Minister, Student Union
- Peer Mentor and Admissions Ambassador
