

Jiaming Wang

Nanjing University, School of Computer Science (Junior)

✉ wangjessamine@gmail.com

Sep. 2023 – Jun. 2027

Education

Nanjing University

B.S. in Computer Science and Technology; Probationary CPC Member

Research Interests

Efficient LLM training and code intelligence, with broader interests in multimodal learning and world models.

Research / Internship

LLM Post-training: Efficient SFT & Open-source Data Protection

Mar. 2025 – Present

- **Co-first Author** | **ICLR 2026 DATA-FM** *Winning the Pruning Gamble*. Showed that naive sample- and token-level pruning can underperform random baselines; proposed error-uncertainty dynamic joint pruning, improving over SFT by up to +38% across 3 datasets, 4 model families, 6 benchmarks, and extreme pruning ratios.
- **Co-first Author** | **ACL 2026 Findings** *Train in Vain*. Developed a functionality-preserving poisoning method for unauthorized data training; led method design, implementation, attack evaluation, ablations, and efficiency analysis; achieved **100% compilability** with only 10% injection under executability/readability constraints.

Agents: Effectiveness-Efficiency Trade-offs in Search / Code Agents

Jul. 2025 – Present

- **First Author** Collected failed Search Agent trajectories, and analyzed failure modes; studied experience reuse for Agentic RL process rewards and validated critic-model data synthesis through training.

Multimodal Learning: T2AV Evaluation & Panoramic Video Camera Motion

Oct. 2025 – Present

- **Co-first Author** | **ICML 2026 T2AV-Compass**. Designed a comprehensive benchmark for text-to-audio-video generation, combining objective metrics, MLLM-based subjective evaluation, and multi-experiment consistency analysis to identify key bottlenecks in current systems.
- **Deep Learning Algorithm Intern** | **Insta360 Algorithm Innovation Research Institute**
Worked on controllable video generation and editing systems, including complex-prompt video editing, panoramic camera-motion generation, data construction, offline evaluation, and efficient model inference.

Survey: Linear Attention

Sep. 2025 – Jan. 2026

- *A Survey of Linear Attention: Algorithm, Theory, Application, and Infrastructure*

Technical Skills

- **Languages:** Python, C/C++, Shell, Java
- **ML Frameworks:** Megatron, verl
- **Tools:** Git, Docker, Slurm, Linux
- **Data / Analysis:** AST, Pandas, NumPy

Panoramic Video Camera-Motion Generation with VLA | Insta360

2025 – Present

- Adapted VLA-style policy architectures to panoramic video camera-motion generation, formulating camera control as visual-conditioned trajectory/action generation for long-horizon video composition.
- Explored world-model-inspired scene representations for panoramic videos, focusing on temporal consistency, subject framing, motion smoothness, and controllable viewpoint planning.
- Built data synthesis, auto-labeling, offline evaluation, and version-comparison pipelines for camera-motion agents.

Honors & Awards

- **NJU:** Outstanding CYL Cadre; People's Scholarship; Outstanding Student Leader; Outstanding Student; Tencent Scholarship
- **Jiangsu Province:** Outstanding Social Practice Team

Leadership & Service

Student Leadership and Teaching Assistantship

2023 – Present

- TA for Advanced C++ Programming; class Youth League secretary and vice monitor; Student Union executive minister; head of Shanxi admissions outreach; peer mentor.
